

## C0. Introduction

---

### C0.1

---

**(C0.1) Give a general description and introduction to your organization.**

Minneapolis-based U.S. Bancorp (NYSE: USB), with 74,000 employees and \$482 billion in assets as of June 30, 2019, is the parent company of U.S. Bank National Association, the fifth-largest commercial bank in the United States. The Minneapolis-based bank blends its relationship teams, branches and ATM network with mobile and online tools that allow customers to bank how, when and where they prefer. U.S. Bank is committed to serving its millions of retail, business, wealth management, payment, commercial and corporate, and investment services customers across the country and around the world as a trusted financial partner, a commitment recognized by the Ethisphere Institute naming the bank a 2019 World's Most Ethical Company.

At U.S. Bank, we care deeply about promoting sustainable business practices while supporting economic growth and we embrace our responsibility to be a good steward of our natural resources. We have implemented a 'continuous improvement' approach by protecting and conserving our natural resources through methods such as: 1) Developing business practices that protect and conserve our natural resources; 2) Embracing opportunities for new products, services and partnerships that improve our environmental sustainability 3) Adopting new technologies, such as renewable resources, that continue to reduce our carbon footprint. Many of these approaches can create long-term value for our stakeholders through increased revenues, reduced costs and reduced risks. But just as importantly, these efforts can help improve the world we all share.

Community Possible is the corporate giving and engagement platform at U.S. Bank, focused on the areas of Work, Home and Play. The company invests in programs that provide stable employment, a safe place to call home and a community connected through arts, culture, recreation and play. In 2018, U.S. Bank gave over \$57 million to non-profit organizations across the country through its Foundation and corporate contributions. U.S. Bank employees also donated 209,000 hours of their time in 2018 to volunteering with organizations that benefit the communities in which they live. **C1. Governance**

---

**C1.1**

---

**(C1.1) Is there board-level oversight of climate-related issues within your organization?**

Yes

**C1.1a**

---

**(C1.1a) Identify the position(s) (do not include any names) of the individual(s) on the board with responsibility for climate-related issues.**

Position of individual(s)	Please explain
Board-level committee	The committee with the highest level of direct responsibility for climate change is our Public Responsibility Committee (PRC), an official committee of U.S. Bancorp Board of Directors. It is comprised of independent directors. The committee's purpose is to review/ consider U.S. Bancorp's position/ practices on matters of public interest and public responsibility and similar issues involving our relationship with the community at large, including reputation. The committee charter, under the Powers and Responsibilities section, states the committee oversees "the Company's policies and programs related to corporate social responsibility matters, including environmental sustainability." Its oversight includes how climate change risk fits into the overall business strategy and how we can manage our operations responsibly. This work fits under the PRC due to our responsibility to protect the communities in which we operate (public) and potential reputation impact of this work.

**C1.1b**

---

**(C1.1b) Provide further details on the board's oversight of climate-related issues.**

Frequency with which climate related issues are a scheduled agenda item	Governance mechanisms into which climate related issues are integrated	Please explain
Scheduled – some meetings	Reviewing and guiding strategy Reviewing and guiding major plans of action Reviewing and guiding risk management policies Monitoring and overseeing progress against goals and targets for addressing climate-related issues	Environmental updates, including climate-related issues, are presented to the Public Responsibility Committee (PRC) of the Board of Directors at a minimum once per year. In 2018, because of director interest, a review and discussion happened at the full board level, as well as a second review at PRC. The purpose of these updates is to review strategy, goals, possible risks, as well as risk mitigation initiatives, and major environmental partnerships/ initiatives. These scheduled presentations ensure accountability as well as allow board members to provide feedback and guidance on current and future work. Board members are also encouraged to share trends they are seeing around climate change. For example, based on a board member's recommendation, the U.S. Bank team researched a growing focus around biodiversity and its potential impact on U.S. Bank's current environmental strategy. Each time environmental information is shared with the PRC, an update on progress towards U.S. Bank's GHG target is provided. This allows members to ask questions and hold employees accountable to meeting the target. As new goals are explored, they are reviewed with the committee to provide feedback and guide our strategy around setting goals and how best to meet those goals.

**C1.2**

**(C1.2) Provide the highest management-level position(s) or committee(s) with responsibility for climate-related issues.**

Name of the position(s) and/or committee(s)	Responsibility	Frequency of reporting to the board on climate related issues
Other C-Suite Officer, please specify (U.S. Bank's Chief Administrative Officer)	Both assessing and managing climate-related risks and opportunities	Annually

**C1.2a**

**(C1.2a) Describe where in the organizational structure this/these position(s) and/or committees lie, what their associated responsibilities are, and how climate-related issues are monitored (do not include the names of individuals).**

U.S. Bank's Chief Administrative Officer (CAO) reports directly to the CEO and is responsible for overseeing the management of U.S. Bank's reputational risk, including climate change risk. This responsibility is included in her annual goal plan. Issues are monitored and reported to the CAO by U.S. Bank's Chief Corporate Social Responsibility Officer (CCSRO), who reports directly to the CAO, and U.S. Bank's Environmental Program Manager who is part of the CCSRO's team. The CAO evaluates and manages exposure to emerging environmental, social and governance trends that pose reputational risk. Day to day climate related issues are monitored and managed by the Environmental Program Manager. This includes quarterly meetings and working with an enterprise wide group of senior leaders (Environmental Working Group) to assess and implement U.S. Bank's climate related initiatives. Regular updates are provided to the CCSRO and included in weekly email updates to the CAO as needed. U.S. Bank's Reputation Risk Oversight Committee (RROC), which is an official subcommittee of an executive level committee and includes the CAO, as well as the CCSRO, provides oversight for the Environmental Working Group and receives quarterly updates regarding climate related issues. Annual updates, at minimum, are provided to the Public Responsibility Committee of the board of directors.

The work outlined above fits within the scope of the CAO's role as the C-suite executive tasked with managing U.S. Bank's reputation. Climate change is a risk we take very seriously and one that our stakeholders are showing an increase in interest around. As such, it can have a significant impact on our reputation. Also, as the C-suite executive tasked with managing the impact on the communities we serve and sharing our company brand and strategy, our impact on the environment is a key piece of that work. "We do the right thing" is central to our brand and our identity as a company, and lessening our impact on the environment is the right thing to do.

### C1.3

---

**(C1.3) Do you provide incentives for the management of climate-related issues, including the attainment of targets?**

Yes

### C1.3a

---

**(C1.3a) Provide further details on the incentives provided for the management of climate-related issues (do not include the names of individuals).**

**Who is entitled to benefit from these incentives?**

Other C-Suite Officer

**Types of incentives**

Monetary reward

**Activity incentivized**

Behavior change related indicator

**Comment**

U.S. Bank's Vice Chairman and Chief Administrative Officer has high level oversight of company environmental strategy and policy, including U.S. Bank's GHG emissions reduction target of 40% by 2029 and 60% by 2044. This includes employee engagement around environmental efforts to reduce corporate emissions, customer engagement and driving internal change towards being more environmentally responsible. She has oversight of strategy and initiatives to drive U.S. Bank's environmental progress, including meeting our target, and this is written into her annual performance goals. Her compensation is informed by achieving the goals in her goal plan.

---

**Who is entitled to benefit from these incentives?**

Business unit manager

**Types of incentives**

Monetary reward

**Activity incentivized**

Behavior change related indicator

**Comment**

---

U.S. Bank's Chief Corporate Social Responsibility Officer is responsible for managing the employees who set U.S. Bank's environmental strategy, including performance targets. She is also responsible for managing climate change risk in partnership with her team. Management of climate change strategy and risk is part of her performance goals and success is incentivized through annual performance awards.

---

**Who is entitled to benefit from these incentives?**

Environment/Sustainability manager

**Types of incentives**

Monetary reward

**Activity incentivized**

Emissions reduction project

**Comment**

U.S. Bank's VP - Environmental Program Manager is responsible for coordinating efforts to engage employees and modify behaviors to reduce emissions, as well as working across business lines to coordinate energy/ emissions reduction initiatives. Success is incentivized through annual performance awards.

---

**Who is entitled to benefit from these incentives?**

Energy manager

**Types of incentives**

Monetary reward

**Activity incentivized**

Energy reduction project

**Comment**

U.S. Bank's VP - Energy Manager within Corporate Real Estate has a bonus that is largely driven by improvements in energy consumption and reduced emissions caused by reduced energy usage.

---

**Who is entitled to benefit from these incentives?**

Business unit manager

**Types of incentives**

Monetary reward

**Activity incentivized**

Emissions reduction project

**Comment**

Renewable energy managers within the U.S. Bancorp Community Development Corporation are responsible for tax credit investing of projects within the solar/ renewable energy industry. These projects help customers reduce or avoid GHG emissions. These managers are incentivized by the number of renewable energy projects they facilitate and manage.

---

**Who is entitled to benefit from these incentives?**

All employees

**Types of incentives**

Recognition (non-monetary)

**Activity incentivized**

Behavior change related indicator

**Comment**

Development and implementation of sustainability initiatives, including those which have direct impact on emissions reduction, such as energy reduction and transportation initiatives. U.S. Bank employees are encouraged to recognize each other using the Best in US portal - U.S. Bank's employee recognition program.

---

## C2. Risks and opportunities

---

C2.1

**(C2.1) Describe what your organization considers to be short-, medium- and long-term horizons.**

	From (years)	To (years)	Comment
Short-term	0	1	
Medium-term	1	5	
Long-term	5	100	

C2.2

**(C2.2) Select the option that best describes how your organization's processes for identifying, assessing, and managing climate-related issues are integrated into your overall risk management.**

Integrated into multi-disciplinary company-wide risk identification, assessment, and management processes

C2.2a

**(C2.2a) Select the options that best describe your organization's frequency and time horizon for identifying and assessing climate-related risks.**

	Frequency of monitoring	How far into the future are risks considered?	Comment
Row 1	Six-monthly or more frequently	>6 years	U.S. Bank risk management procedures vary across types of potential risks (asset level, portfolio risk, reputational risk, etc.) In general, the time frame looks out up to 20 years depending on the product type and length of commitment. Depending on nature and severity of the risk identified, the results are reported up through the impacted business line risk division, the corporate-wide risk division, the Environmental Working Group, and the Reputation Risk Oversight Committee who oversees the Environmental Working Group. An environmental update is shared at least annually with the Board of Directors' Public Responsibility Committee. This report includes an update on environmental risk identification processes and potential high impact risks. U.S. Bank's focus is mainly on national (U.S.), but some international focus as well.

C2.2b

**(C2.2b) Provide further details on your organization's process(es) for identifying and assessing climate-related risks.**

U.S. Bank's enterprise risk management policy covers management of risks that may negatively impact the Company, including credit, financial, liquidity, market, operational, reputational, strategic, and other risks as appropriate. U.S. Bank has a Chief Risk Officer who reports to the CEO. She leads the independent risk management organization, Risk Management & Compliance, which provides oversight of the Company's risk-taking activities.

In addition, every business line within U.S. Bank has a team specifically focused on all types of risks, both at the business unit level (i.e. risk in lending portfolio or product specific risk), risks at the asset level (i.e. corporate real estate for our facilities and credit risk for assets within our portfolio), and risks at the company level (reputational risk or supply chain risk). U.S. Bank encourages open discussion and escalation of possible risks across all business lines.

U.S. Bank utilizes a multiple line of defense approach in the prioritization of risk, looking at business line risk management, corporate-level risk management and assurance/validation/verification of our risk management processes, with escalation processes and procedures clearly defined.

From an opportunities perspective, as risks are identified and addressed, business lines simultaneously look for ways to turn these into opportunities for additional product development/sales, and/or cost savings, and opportunities are typically prioritized by creation of positive operating leverage (balancing the revenue potential with the development expense).

U.S. Bank seeks feedback from NGOs, industry groups, customers, shareholders, and peer banks to better understand and identify current and potential risks related to climate change. U.S. Bank recently conducted a materiality assessment with our non-profit partner, Ceres. Through this process, we engaged with customers, investors, peers and employees to seek feedback on most relevant risks and opportunities related to our company and business, including climate risks/ opportunities. This process provided valuable feedback to assess target areas moving forward.

Specifically related to climate change, U.S. Bank would recognize impact of risks/ opportunities to be substantive to the organization and prioritize them based on the likelihood and significance of the potential financial and/or reputational impact to the company. U.S. Bank would define substantive as having a significant financial, reputation or social impact, which would vary by business line, or impacting our business operations and/ or brand, making it more difficult to meet the needs of our customers and communities. This includes consideration around 1) number of business lines and/ or customers affected, 2) potential financial loss and/or revenue as a result of the risk or opportunity, and 3) stakeholder attention around the risk/ opportunity, including potential effect on U.S. Bank's reputation. Highest priority would be given to any risk or opportunity seeing an increase in more than one of the three metrics listed.

**C2.2c**

**(C2.2c) Which of the following risk types are considered in your organization's climate-related risk assessments?**

	Relevance & inclusion	Please explain
Current regulation	Relevant, always included	As a financial services company, we are highly regulated, so this is always relevant to our business and included in our climate-related risk assessment. Two members of U. S. Bank's legal department are part of the Environmental Working Group that drives climate related risk management initiatives and our formal risk management process includes a detailed review by corporate compliance who is well versed in current regulations. Current regulation that is included in our risk assessment is around renewable energy tax credits. The U.S. Bancorp Community Development Corporation is a leader in the renewable energy investment tax credit and community solar garden markets. Increased regulation, setting limits around the types of investments allowed under the tax credit, or a decrease in supportive regulation, such as discontinuing the tax credit at the federal level, in this area might lead to a reduced ability to make these types of investments. In 2018 U.S. Bancorp Community Development Corporation invested more than \$1.1 billion in renewable energy. These investments helped add 1.5 gigawatts of solar power across the country, create 17,000 construction jobs, and produced an equivalent amount of renewable energy to power 240,000 homes. The carbon offset of these investments is equal to removing 377,000 passenger vehicles from the road or planting two million acres of forest.

	Relevance & inclusion	Please explain
Emerging regulation	Relevant, always included	Similar to current regulations, as a financial services company, we are highly regulated, so this is always relevant to our business and included in our climate-related risk assessment. Two members of U. S. Bank's legal department are part of the Environmental Working Group that drives climate related risk management initiatives and our formal risk management process is a detailed review by the compliance team who is well versed in current regulations. An example of emerging regulation that is being assessed throughout our risk management process is increased taxes and regulation around energy and fuel. Increased taxes and regulation around fuel and energy would increase the operating cost to run U.S. Bank's over 3,000 locations. It might also affect the type of energy we can purchase, which has the potential to force us into fuel/ energy purchasing agreements with a higher cost than previous partnerships. In 2018, U.S. Bank spent approximately \$67 million on energy to operate our over 3,000 locations. If fuel and energy taxes increase, these costs will increase the level of funding needed to operate our facilities.
Technology	Relevant, always included	U.S. Bank offers many online services that reduce emissions by eliminating the need to travel to branches for customers' banking needs. Data security is paramount to who we are as a company and to our industry in general, so any risks involved with these services are always included in our risk management process. An example would be the fact that U.S. Bank recently became the first bank to offer banking services on all three major platforms: Amazon Alexa, Google Home and Apple Siri. In order to reduce risk of unauthorized persons accessing customer information through these types of devices, certain banking functions are not allowed when using these platforms. Added technology also presents a risk within our operations. In 2018, U.S. Bank added a large domestic data center to accommodate a growing need for increased capacity for both employee and customer needs. This increases operating costs due to an increase in energy use. Data centers also create unique physical security risks, in the event of heightened natural disasters caused by climate change. Precautions need to be taken to ensure service to our customers continues in the event a data center is impacted.
Legal	Not relevant, included	We have not faced any climate-related litigation as a company, so we do not currently consider this risk relevant to our company. We do monitor potential legal risk and will consider it relevant if we see a change in our current situation.
Market	Relevant, sometimes included	Market shifts do affect our customers, which in turn can affect our bottom line through an increase in write-offs. For example, if the shift to a low carbon economy increases the market for electric vehicles, any customers in the automotive industry who have not diversified into this market might see a decrease in revenue, resulting in an inability to meet financial commitments, which would, in turn, affect U.S. Bank's business. When we see a market shift that would affect a large number of customers, we would then include the risk in our portfolio review and risk assessment. With the shift to a low carbon economy, U.S. Bank is beginning to look at products to assist and/ or encourage our customers with this shift. Examples of products being explored are renewable energy lending and special loan pricing tied to ESG performance. Because of this, we see market shifts as both a risk and an opportunity to expand our business.
Reputation	Relevant, always included	Increased expectations from customers, shareholders, and investors regarding disclosure and management of environmental impact have led to more scrutiny and reputation risk. As a financial services provider, U.S. Bank's impact may be much lower than that of our customers, but we are more frequently being evaluated based on our customers' environmental impact due to our financial relationship with them. A negative evaluation could damage U.S. Bank's reputation and result in a loss of business, so we make sure to take the time to get to know our customers. Due to an increase in feedback being received through our Customer Experience Group, our Investor Relations Group, and our Communications team, we now have a better, more streamlined approach to collecting this feedback and assessing the risk through our Environmental Working Group. U.S. Bank also has a dedicated Reputation Risk Officer who works with business line chief risk officers to evaluate reputation risk that originates from external relationships throughout the organization. This is done through an internal relationship review working group and is supplemented by a newly created escalation protocol that engages the Bank's Chief Risk Officer and other executive committee members as needed.
Acute physical	Relevant, always included	Natural disasters affect U.S. Bank's customers and can lead to their inability to fulfil commitments. If their business is destroyed through flooding or other climate related event, they may be unable to conduct business. This would lead to an inability to repay debt and a decrease in future relationship opportunities. U.S. Bank attempts to evaluate customer relationships in relation to recent trends through our risk management process. A dashboard has been created to track financial impact to our portfolio from past events and evaluate the likelihood of future impact from additional disasters.
Chronic physical	Relevant, always included	Similar to the acute physical occurrences, chronic shifts caused by climate change can also affect our customers and their ability to fulfil commitments, as well as a decrease in future relationship opportunities. Our Risk Management Team is working on stress testing our portfolio against current drought conditions, as well as worsening conditions. Changes in temperature extremes will also lead to an increase in energy use to heat and cool U.S. Bank's over 3,000 locations. U.S. Bank has several locations in the Western/ Southwestern United States, in cities such as Las Vegas, Phoenix, San Diego and Los Angeles. With temperatures continuing to rise, especially in the desert climates, our locations in these areas will require a continually higher level of cooling. U.S. Bank is headquartered in Minneapolis, a traditionally cool city, and has a large presence in other northern locations, such as Milwaukee. These locations do not usually require a high level of cooling, but with increasingly warmer weather, they now require more use of air conditioning units, resulting in higher costs and emissions. In 2018, U.S. Bank spent approximately \$67 million on energy to operate our over 3,000 locations. If extreme temperatures worsen, these costs will increase the level of capital needed to operate our facilities.
Upstream	Not relevant, explanation provided	As a financial services company, U.S. Bank's upstream assets are limited and not reliant on specific suppliers, so they would not pose a significant risk if impacted by climate change.
Downstream	Relevant, always included	As a financial services company, U.S. Bank's downstream risks involve our customers and climate change impacts that affect their ability to fulfill commitments and expand their relationship with us. We work to mitigate this risk through enhanced due diligence of customers within high environmental impact industries. We also address this risk through our portfolio stress testing against natural disasters.

## C2.2d

**(C2.2d) Describe your process(es) for managing climate-related risks and opportunities.**

Management of climate change risks and opportunities is integrated into U.S. Bank's business strategy due to its broad array of potential impacts (both positive and negative), whether direct (to company assets or business opportunities/approach) or indirect (reputational). We have a robust reputation risk management process to help ensure we are appropriately identifying and addressing emerging reputation risks, including environmental risks. This process continues to evolve and be enhanced through cross-functional information and resource sharing. We use shared databases and specific presentations to educate and inform various business lines so each business line can integrate climate change into their business risk management process and identify opportunities for business growth.

As regulatory/legislative measures are implemented, there is direct impact to opportunities (new products/services to help customers meet the requirements), business practices (ensuring our compliance with applicable requirements), and risk (will the requirements result in a negative impact on ability to do business or cost to do business for our company and our customers). Our Environmental Working Group and other feedback mechanisms ensure the communication is shared with the appropriate parties to prioritize the identified risks/opportunities. Opportunities are managed through the same channels outlined above for identifying risks. U.S. Bank views opportunities as a function of our risk mitigation function. Where there is a risk, we look for opportunities to better meet customer need and mitigate potential risk before it happens.

An example of a potential opportunity related to climate change and a transition to a low carbon economy that was shared through our Environmental Working Group was renewable energy lending. This was feedback provided by U.S. Bancorp's Community Development Corporation as an opportunity to meet client needs and is now being explored as a new product. Our extensive risk infrastructure monitors and helps mitigate risks due to climate change such as disaster recovery in the event of severe weather instances.

An example of how we have managed transitional climate change risk within our customer portfolio is through the expansion of our due diligence process to assess the environmental and reputation risk of customer relationships. This work continues to be escalated to senior management in a continued effort to heighten environmental impact awareness across all business lines, thus being reflected in individual business line strategy and goals. U.S. Bank established a Relationship Risk policy in 2018 to create a consistent enterprise framework for managing reputationally-high risk relationships. A Working Group that outlines policy expectations for prohibited segments or those that present elevated risk, including those who have a high environmental impact, such as coal mining, coal-fired power plants and timber/forestry activities.

U.S. Bank creates a unified approach through an enterprise Environmental Responsibility Policy that is integrated and linked from various other policies throughout the company, such as the credit policy and relationship review policy. This brings together corporate policies for wider awareness around U.S. Bank's environmental practices. Having an enterprise approach provides greater visibility to identify and uniformly manage relationship risks and allows us to identify opportunities for growth within emerging low carbon industries, such as renewable energy.

Another way U.S. Bank is working to manage transitional risk is conducting a materiality assessment with sustainability nonprofit, Ceres, and working with them to evaluate current environmental and social risk management practices and provide guidance on establishing a stronger risk management framework to close gaps and best address risks the company faces related to environmental and social issues, including climate change. A more streamlined framework will allow us to better assess transitional risk among our portfolio if certain high impact industries begin to struggle as a result of changing regulation and market demand during a shift to a low carbon economy.

An example of how we have managed physical climate change risks and opportunities is through energy efficiency programs. Increasing temperatures caused by climate change have the potential to significantly increase the cost to power U.S. Bank's over 3,000 locations. We have managed this risk through energy efficient upgrades, such as LED lighting, more efficient HVAC equipment and motion sensor lighting. Our work towards decreasing the energy footprint of our buildings has opened opportunities for us to save money through reduced energy bills and through increased partnership with our energy vendors, such as purchasing renewable energy through Xcel Energy's Renewable Connect program.

## C2.3

---

**(C2.3) Have you identified any inherent climate-related risks with the potential to have a substantive financial or strategic impact on your business?**

Yes

## C2.3a

---

**(C2.3a) Provide details of risks identified with the potential to have a substantive financial or strategic impact on your business.**

**Identifier**

Risk 1

**Where in the value chain does the risk driver occur?**

Direct operations

**Risk type**

Physical risk

**Primary climate-related risk driver**

Chronic: Rising mean temperatures

**Type of financial impact**

Increased operating costs (e.g., inadequate water supply for hydroelectric plants or to cool nuclear and fossil fuel plants)

**Company- specific description**

In 2018, U.S. Bank spent \$67 million on energy to operate our over 3,000 locations. Rising temperatures will mean air conditioners will run more frequently, causing this cost to increase. U.S. Bank has several locations in the Western/ Southwestern United States, in cities such as Las Vegas, Phoenix, San Diego and Los Angeles. With temperatures continuing to rise, especially in the desert climates, our locations in these areas will require a continually higher level of cooling. U.S. Bank is headquartered in Minneapolis, a traditionally cool city, and has a large presence in other northern locations, such as Milwaukee. These locations do not usually require a high level of cooling, but with increasingly warmer weather, they now require more use of air conditioning units, resulting in higher emissions and costs.

**Time horizon**

Current

**Likelihood**

Virtually certain

**Magnitude of impact**

Low

**Are you able to provide a potential financial impact figure?**

Yes, a single figure estimate

**Potential financial impact figure (currency)**

670000

**Potential financial impact figure – minimum (currency)**

<Not Applicable>

**Potential financial impact figure – maximum (currency)**

<Not Applicable>

**Explanation of financial impact figure**

We estimate that we could see an annual 1% increase in our energy cost due to increased temperatures across our footprint and

an increased need to cool U.S. Bank's over 3,000 buildings. This is an estimate and might vary.

#### **Management method**

In an effort to mitigate this risk, we are working to upgrade our facilities to be more energy efficient. Examples of this are installations of motion sensor lighting, building all new branch locations to LEED certified standards, switching out light bulbs/fixtures to more efficient options, etc. We approved 11 projects in 2018, mostly LED upgrades, including several large buildings in Ohio and Missouri, where the expected impact is an annual reduction of nearly 5000 MWh of electrical energy. \$2 million is U.S. Bank's annual budget for energy efficient projects. This is considered the "cost of management" because the full amount is dedicated to reducing the energy use of U.S. Bank buildings in an effort to decrease the effect increased energy prices might have on operational costs.

#### **Cost of management**

2000000

#### **Comment**

---

#### **Identifier**

Risk 2

#### **Where in the value chain does the risk driver occur?**

Customer

#### **Risk type**

Physical risk

#### **Primary climate-related risk driver**

Acute: Increased severity of extreme weather events such as cyclones and floods

#### **Type of financial impact**

Reduced revenue from decreased demand for goods/services

#### **Company- specific description**

U.S. Bank's Risk Management Team completed a financial impact assessment following recent hurricanes in the southeast and did experience a negative financial impact due to forgiven interest, actual losses and reduced revenue. The forgiven interest was an effort to lighten the stress of our customers following such a devastating loss. This was also done following the devastating fires in California due to increasingly dry conditions in that region. Because U.S. Bank has a larger presence in California than in the southeast portion of the United States, losses seen due to this disaster were greater.

#### **Time horizon**

Short-term

#### **Likelihood**

Virtually certain

#### **Magnitude of impact**

Medium

#### **Are you able to provide a potential financial impact figure?**

No, we do not have this figure

#### **Potential financial impact figure (currency)**

<Not Applicable>

#### **Potential financial impact figure – minimum (currency)**

<Not Applicable>

#### **Potential financial impact figure – maximum (currency)**

<Not Applicable>

#### **Explanation of financial impact figure**

U.S. Bank is currently tracking financial impact of historical climate related events in an effort to inform risk management around future events. We have begun estimating potential future financial impact but are not at a point where we are able to disclose this information.

#### **Management method**

U.S. Bank attempts to evaluate customer relationships in relation to recent trends through our risk management process. Industries that are more sensitive to flooding and other climate change impacts are evaluated more closely by location and risk management processes in place to limit impact. This work is completed through our ongoing stress testing work using the Comprehensive Capital Analysis and Review (CCAR) framework. Results of this stress testing are compiled into a dashboard and shared with the Capital

Planning committee of U.S. Bancorp's board of directors. Results are used to assess and potentially limit exposure to certain industries or regions based on risk related to climate related events. There is no additional cost for management due to the risk being managed by staff who are employed in roles with a primary focus other than environmental risk. Climate change risk is being integrated into those other roles are part of the overall risk management structure.

Reduced revenue from decreased demand for goods/services

#### Company- specific description

Increased expectations from customers, shareholders, and investors regarding disclosure and management of environmental impact have led to more scrutiny and reputation risk. As a financial services provider, U.S. Bank's emissions may be much lower than those of our customers, but we are more frequently being evaluated based on our customers' impact due to our financial relationship with them. A negative evaluation could damage U.S. Bank's reputation and result in a loss of business, so we make sure to take the time to get to know our customers. U.S. Bank is headquartered in Minnesota where there has been significant activism around environmental issues specifically related to energy companies and pipelines. U.S. Bank was the target of some activism due to an existing relationship, unrelated to the pipeline, with the company involved in the build. That relationship has been reduced for several reasons, including business decisions, and as a result, we have seen a decrease in our reputation risk.

#### Potential financial impact figure (currency)

0

#### Potential financial impact figure – minimum (currency)

<Not Applicable>

#### Potential financial impact figure – maximum (currency)

<Not Applicable>

#### Explanation of financial impact figure

To date, we have not seen a financial impact based on recent experience and research into the role environment plays in customer choices for doing business. We seek to manage environmental risks associated with our higher impact customers in an effort to reduce risk to U.S. Bank.

#### Management method

U.S. Bank strives to be responsible stewards of the environment , so even though the financial impact of reputation risk is minimal, we work hard to tell our positive story around environmental responsibility and to mitigate any negative exposure risk. In 2018, we continued to enhance policy overview for our Environmental Responsibility Policy by adding more robust quality assurance to ensure procedures are being followed. This process is now managed by the Chief Reputation Risk Officer and his team. Samples of the required enhanced environmental due diligence are pulled and evaluated for quality. A report of findings is communicated with Chief Risk Officers in each business that didn't pass evaluation. They are tasked with ensuring appropriate training to complete the required due diligence in a satisfactory manner. U.S. Bank also has a relationship review committee made up of senior level

staff to evaluate potential reputation risk attached to specific customers. Recommendations from this committee are reviewed with a C-Suite level committee for feedback and guidance. This provides a higher level of oversight for environmental reputation risk and drives engagement with customers who are determined to pose a higher reputation risk for U.S. Bank. Cost of management is minimal, as management has mostly been a change in oversight and an escalation in issue awareness. Because we already had processes in place for this, additional capital was not needed.

Products and services

**Primary climate-related opportunity driver**

Development and/or expansion of low emission goods and services

**Type of financial impact**

Increased revenue through demand for lower emissions products and services

**Company-specific description**

A shift to a low carbon economy could lead to an increase in programs such as the federal tax credit program and community solar gardens (CSG). The U.S. Bancorp Community Development Corporation (CDC) is a leader in this space and would see an increase in investment opportunities should the investment tax credit programs continue. They are currently a leader in underwriting CSG programs in states that do not currently have a robust program. In some cases, local regulation does not support the funding of CSG, so it's difficult to create a program, but a positive change in renewable energy regulation to support CSG would allow the U.S. Bancorp CDC to invest in more CSG funds.

## Potential financial impact figure – maximum (currency)

<Not Applicable>

## Explanation of financial impact figure

In 2018, U.S. Bancorp Community Development Corporation invested over \$1.1 billion in renewable energy through tax credits. If these projects are expanded, we would have several more opportunities to significantly increase the dollar amount invested in renewable energy programs, especially community solar gardens. Because U.S. Bank is a leader in this space, we estimate an increase of 30% in our tax credit investment business based on historical activity.

## Strategy to realize opportunity

U.S. Bank is a national leader in financing renewable energy which makes communities more environmentally sustainable as well as more economically resilient through access to affordable energy and the promotion of job growth. At U.S. Bank, we are committed to investing in businesses that are supporting renewable energy efforts and sustainable business practices while supporting job growth. U.S. Bancorp Community Development Corporation (USB CDC) has experts who specialize in renewable energy investing and are seen as leaders in this space. Part of their work includes finding opportunities that drive a clean economy, but also support the communities where we do business. Access to the benefits of renewable energy is often out of reach for many low- and moderate-income (LMI) communities. Completed in 2018, USB CDC invested over \$45 million to develop Villa Hermosa in Santa Fe, NM in an effort to close that gap. The Villa Hermosa project focused on renovating almost 120 affordable, energy-efficient apartments spread across one-story buildings. The project meets the LEED green construction standards, including solar panels on the buildings' roofs, LED lighting, ENERGY STAR appliances, energy efficient cooling and heating systems, and courtyards landscaped with drought-tolerant plant species. Cost of management would be personnel costs associated with the renewable energy group within U.S. Bancorp Community Development Corporation, totaling approximately \$2.7 million.

### Company-specific description

Natural disasters caused by climate change can lead to significant losses for U.S. Bank customers. As a financial institution, it is our privilege to be there to assist in the rebuilding process of those communities where we do business. We do this through lending and investing opportunities. Much of the rebuilding is done with a smaller footprint, such as building a new structure to LEED certified standards or adding new, energy efficient technology to replace damaged equipment. We offer debt products, such as financing for commercial buildings and equity opportunities, such as renewable energy investment tax credit investments. In 2018, U.S. Bank provided over \$1.8 billion in loans and investments for green building or other environmentally beneficial business opportunities, many which were the result of our customers rebuilding following a physical event caused by climate change, or customers working to mitigate risks of future climate change activities. Villa Hermosa is an example of a project financed in part through our renewable energy tax credit investing. Access to the benefits of renewable energy is often out of reach for many low- and moderate-income (LMI) communities. Completed in 2018, USB CDC invested over \$45 million to develop Villa Hermosa in Santa Fe, NM in an effort to close that gap. The Villa Hermosa project focused on renovating almost 120 affordable, energy-efficient apartments spread across one-story buildings. The project meets the LEED green construction standards, including solar panels on the buildings' roofs, LED lighting, ENERGY STAR appliances, energy efficient cooling and heating systems, and courtyards landscaped with drought-tolerant plant species.

**Potential financial impact figure (currency)**

<Not Applicable>

**Potential financial impact figure – minimum (currency)**

18000000

**Potential financial impact figure – maximum (currency)**

90000000

**Explanation of financial impact figure**

In 2018, U.S. Bank provided over \$1.8 billion in loans and investments for green building or other environmentally beneficial business opportunities. We would estimate an increase in this total, 1%-5% based on location, with an increase in natural disasters, as a portion of these opportunities either directly or indirectly contribute to climate change adaptation.

**Strategy to realize opportunity**

U.S. Bank continues to work on meeting the needs of our customers and offering products to assist them with a transition to a low carbon economy. As needs or opportunities for new products are realized, they are brought to the Environmental Working Group for evaluation and socialization within the appropriate business lines. An example of a current product being evaluated through this process is reduced pricing for commercial and corporate customers who meet specific ESG standards. U.S. Bank would use public ESG scoring, such as Sustainalytics and MSCI scores, to evaluate the customer and provide pricing based on tiers. Cost of management would be dollars associated with personnel costs to process loans and investments for rebuilding efforts. There is no additional cost for management due to this being done by staff who are already employed in roles with a primary focus outside of the outlined opportunity.

**Primary climate-related opportunity driver**

Development and/or expansion of low emission goods and services

**Type of financial impact**

Increased revenue through demand for lower emissions products and services

**Company-specific description**

U.S. Bancorp's CDC is a leader in the renewable energy investment tax credit space. In 2018, these investments totaled over \$1.1 billion. Several customers have expressed a desire for U.S. Bank to meet their renewable energy debt needs in combination with the REITC investments. In order to meet customer demand as our customers make the transition to a low carbon economy, U.S. Bank has been pursuing the possibility of offering a renewable energy debt product.

**Time horizon**

**Comment**

**C2.5**

**(C2.5) Describe where and how the identified risks and opportunities have impacted your business.**

	Impact	Description
Products and services	Not impacted	Because U.S. Bank is a financial services company, climate change impacts are realized mostly within our operations and customer portfolio. We have not, yet, seen an impact to the products and services we offer.
Supply chain and/or value chain	Impacted	Increasing demand to do business with environmentally responsible companies has led to a need for U.S. Bank to share more of our environmental impact data with potential customers during the Request for Proposal "RFP" process. An example is a city government we bank asking for investment totals within the oil and gas industry. We have also seen an increase in demand for disclosure from our supply chain and current customers wanting to examine upstream and downstream impacts. We have seen an increase in the number of customers asking that we complete the CDP supply chain questionnaire. This number has grown to 3 customers asking for responses, up from 2 a couple years ago. The magnitude of impact in this area has been minor due to U.S. Bank being a services company and not having the same impact as other companies within our customers' supply chains.
Adaptation and mitigation activities	Impacted	We have strengthened our mitigation activities around understanding the impact our customers are having on climate change and the risk that poses to U.S. Bank. This is done through our enhanced environmental due diligence which is completed before new business is approved and during annual reviews of the relationship. We have also implemented a quarterly portfolio review of high environmental impact customers to assess our exposure to these industries and adapt as necessary to avoid risk. The magnitude of impact in this area has been medium as the increased customer review has led to an increase in documentation and monitoring of our customer impact. This has led to more processes and time to complete these assessments. It has also impacted our business strategy and overall risk management framework.
Investment in R&D	Impacted for some suppliers, facilities, or product lines	Customer demand for a low carbon economy has resulted in internal discussions around potential new business opportunities for U.S. Bank. This includes researching the possibility of entering the debt side of renewable energy production, instead of just focusing on the equity side. This would be a significant investment for U.S. Bank and would have a high magnitude of impact on our lending business.
Operations	Impacted	Climate change risk and stakeholder demand contributed to U.S. Bank setting a GHG emissions reduction target of 40% reduction by 2029 and 60% reduction by 2044. This target necessitates a focus on energy reduction projects, such as lighting and HVAC upgrades, within in our operations. We also joined the Renewable Connect program offered by Xcel Energy to purchase renewable energy for our Minnesota locations and are looking at other options for procuring renewable energy for our facilities. This risk has a medium magnitude impact on our business, as it led to a doubling of budget for our energy efficient projects, which is now \$2 million, up from \$1 million prior to setting the target. It has also stretched us to consider climate change within our building portfolio and look more closely at outside opportunities that may help us reduce our energy use and emissions.
Other, please specify	Please select	

## C2.6

**(C2.6) Describe where and how the identified risks and opportunities have been factored into your financial planning process.**

	Relevance	Description
Revenues	Not impacted	We have not yet seen an impact to our revenue stream, but as the shift to a low carbon economy continues, we will continue to evaluate our customer portfolio. We will assess potential revenue loss from industries that are becoming less profitable due to decreasing public interest and need. We anticipate any future impact will be minimal as we have a diversified customer portfolio and are able to shift our customer base as needed to mitigate risk.
Operating costs	Impacted	Due to climate change causing fluctuations in energy regulations and prices affecting our operating costs, we are working to upgrade our facilities to be more energy efficient. Examples of this are installations of motion sensor lighting, building all new branch locations to LEED certified standards, switching out light bulbs/fixtures to more efficient options, etc. We approved 11 projects in 2018, mostly LED upgrades, including several large buildings in Ohio and Missouri, where the expected impact is an annual reduction of nearly 5000 MWh of electrical energy. We anticipate any future impact will be minimal because of the energy efficiency updates we have made and the fact we, as an industry, are not as energy intensive as others.
Capital expenditures / capital allocation	Impacted	In an effort to better manage climate change impacts to our operations and reputation, U.S. Bank has increased capital towards these efforts. An example of this is the significant investment we made to join the Ceres Company Network. This engagement provided a materiality assessment and roadmap to drive our climate change efforts forward. The magnitude of impact for this opportunity is significant in that it will drive resources and support of our environmental efforts.
Acquisitions and divestments	Impacted	Climate risk would be considered and reported through our annual CDP reporting process for new acquisitions and divestments, as part of our overall climate impact as a company. The magnitude of impact for this opportunity is minimal as other factors, such as market fit and strategy alignment are weighted more heavily with this activity. U.S. Bank would be able to address climate change risks at a later date following the acquisition or divestment activity.
Access to capital	Not impacted	As a financial services company, we do not seek outside capital for our climate change strategy or risk mitigations, so this category is not impacted.
Assets	Impacted	In an effort to mitigate climate change risk, we are working to upgrade our facilities to be more energy efficient. Examples of this are installations of motion sensor lighting, building new branch locations consistent with LEED standards, switching out light bulbs/fixtures to more efficient options, etc. We approved 11 projects in 2018, mostly LED upgrades, including several large buildings in Ohio and Missouri, where the expected impact is an annual reduction of nearly 5000 MWh of electrical energy.
Liabilities	Impacted	By tracking the financial impact of historical natural events caused by climate change, such as the recent hurricanes and fires, we have realized an impact due to increased write-offs and forgiven interest. The magnitude of impact is moderate for this risk due to the diversity of our customer portfolio and the highly regulated nature of our industry.
Other	Please select	

## C3. Business Strategy

### C3.1

**(C3.1) Are climate-related issues integrated into your business strategy?**

Yes

#### C3.1a

**(C3.1a) Does your organization use climate-related scenario analysis to inform your business strategy?**

Yes, qualitative and quantitative

#### C3.1c

### **(C3.1c) Explain how climate-related issues are integrated into your business objectives and strategy.**

Climate-related issues have been integrated into U.S. Bank's short term strategy through addressing regulatory/legislative requirements, reviewing potential climate change risk/opportunity in our credit portfolios, and our approach to continuous improvement in reducing our consumption of natural resources (energy, paper, etc). In the short term, we have partnered with Ceres, an environmental non-profit organization. Their mission is to transform the economy to build a sustainable future for people and the planet, and they conducted a materiality assessment that will guide our long term climate change strategy. We have also partnered with them to evaluate and offer guidance on U.S. Bank's environmental and social risk management framework. This framework will be integrated across the enterprise to meet the overall business risk management objectives.

Climate-related issues have been integrated into U.S. Bank's long term strategy through our approach to building design and retrofits (designed for energy/environmental efficiency), by continuing to expand our environmental due diligence process to help mitigate risk, and by having a more specific focus on methods to capitalize on the opportunities created by climate change as identified through our various internal risk/opportunity identification process. This includes increased investments in the renewable energy space. U.S. Bank's operational strategy has been influenced by climate change, resulting in our decision to set a GHG emissions reduction target of 40% reduction by 2029/ 60% reduction by 2044 using 2014 as a baseline.

In today's environment, customers, investors and employees are increasingly aware of the importance of sustainability in the companies with whom they interact, and therefore communication to those constituents about our approach, and providing tools and resources to educate and engage our customers, has become increasingly important and can help us gain competitive advantage, resulting in customer/ employee acquisition and retention. Our work to expand our environmental efforts contributed to U.S. Bank being recognized as a World's Most Ethical Company by Ethisphere in 2015, 2016, 2017, and 2018. In addition, cost reduction as a result of our energy reduction efforts will provide a competitive advantage through greater available capital for non-energy related initiatives, such as product and strategy development.

Some key business decisions that have been made are: 1) our focus on the use of Energy Star Portfolio Manager to help benchmark performance and prioritize investment in our facilities; 2) continuing to look at the effectiveness of our environmental due diligence process across the enterprise for relationships with potentially high environmental impact; 3) escalating the management of climate change initiatives to a more senior role, as well as moving the policy oversight to an official subcommittee of an executive level committee that includes the Chief Administrative Officer, as well as the Chief Corporate Social Responsibility Officer. The most substantial business decision U.S. Bank has made as a result of climate change is the decision to set a GHG emissions reduction target.

A key business decision made in 2018 was to include a newly developed environmental strategy, which is tied to an overarching social impact strategy, in the enterprise strategy shared and managed at the highest levels of leadership within the company. The enterprise strategy drives business decisions and objectives for the next few years. This newly developed strategy focuses on addressing climate change through the advancement of renewable energy investment and partnerships. U.S. Bank will also be looking at opportunities to stay on par with peers through incremental goals and progress. Because of U.S. Bank's expertise in the renewable energy space, we felt this was a good area of focus where we could leverage the knowledge and talent already in place.

Environmental responsibility is one of the core focuses of our corporate social responsibility strategy at U.S. Bank and it will continue to be moving forward. Looking towards the future, we will continue to evaluate the impact our customers are having on the environment through an annual portfolio review. This review allows us to look at our exposure to certain high environmental impact industries to evaluate if any changes need to be made to our policy, strategy or portfolio in order to reduce our climate change risk.

### **C3.1d**

---

**(C3.1d) Provide details of your organization’s use of climate-related scenario analysis.**

Climate related scenarios	Details
Other, please specify (CCAR (Comprehensive Capital Analysis and Review))	<p>Scenario analysis has been used at our company for several years to understand the potential impact of adverse events. This includes events due to several factors from climate-related events, to economic-related events, and operational-related events. The firmwide scenario development process is managed by the Scenario Design Director within Risk Management and Compliance. The process is governed by a senior operating committee of the board of directors. With climate change causing an increase in natural disasters, it is important that we understand how these occurrences will affect our customers and our company. This is top of mind for this team. This begins with tracking the financial impact of past climate-related events. These events are tracked on a consolidated report, called a dashboard. Examples of recent climate-related events tracked on the dashboard include hurricanes and fires. Data tracked include losses, revenue, and other expenses from these events. The Scenario group uses the dashboard's climate-related events to build scenarios of potential events. A natural disaster scenario and the adverse impacts of historical natural disasters recurring were included when setting U.S. Bank's 2019 capital plan as part of CCAR. Disasters were identified through our risk identification and assessment process and selected by executive management through our existing CCAR governance process. Inputs, assumptions &amp; analytics are developed based on historical experience and expectations that similar events will occur in the future. A nine quarter forecast is used, which is aligned with our capital planning process and CCAR / DFAST stress test requirements. Scenarios are presented to various business partners in an effort to protect our business from future climate change effects. Once scenarios are selected, the company estimates the potential financial impacts. Results are shared with the board of directors via a presentation to the Capital Planning Committee. The Scenario Design group plans to continue to build scenarios for climate impacts that have yet to occur. The scenarios may include several events such as floods, droughts, or earthquakes. Plans are in place to continue this work and refine the process as the company learns from past events and results from the scenario analysis process. This work is tied to our internal capital adequacy assessment processes. It is informed by regulations that govern the capital planning process, notably the CCAR regulatory rule. The framework relies on scenarios designed to stress specific vulnerabilities of our risk profile and operations, including those related to capital adequacy and financial condition. We identify scenarios based on which would have the most significant impact on our organization, such as possible climate related effects in regions of the U.S. where we have a larger customer base or more assets. Another important element is where we have significant business operations. These areas impact our employees and ability to serve our customers in that region or nationally. Analysis began in 2012, looking at the impact of Hurricane Sandy on our customers. Results include financial impact and actions taken as a result of the scenarios. U.S. Bank's business objective remains the same, to protect our company from risk within our customer portfolio, but the strategy has evolved to take a more holistic approach and look at events outside the customer's control that might affect their business, and in return, affect our business. The scenario results have influenced our business decisions by informing capital planning, assessing capital adequacy given the natural disaster occurs in addition to other adverse events—specifically a severe recession. For this work, the full enterprise is considered, but impact is limited to those areas previously impacted by like natural disasters.</p>

**Comment****C4.3c****(C4.3c) What methods do you use to drive investment in emissions reduction activities?**

Method	Comment
Dedicated budget for energy efficiency	U.S. Bank's Energy and Sustainability Manager within Corporate Real Estate has a dedicated budget for energy efficiency projects. He is using this budget to upgrade our facilities to be more energy efficient. Examples of this are installations of motion sensor lighting, and switching out light bulbs and fixtures to more efficient options. 84 projects were implemented in 2018, mostly LED upgrades in which the expected impact is an annual reduction of nearly 975 MWh of electrical energy.
Internal incentives/recognition programs	U.S. Bank's facility managers receive reporting for lowest performing locations within their portfolio and site-based improvements are planned and recognized.
Employee engagement	U.S. Bank's Environmental Program Manager is responsible for employee education and engagement across the enterprise. This includes sharing tips and information via internal collaboration sites and hosting educational calls available to all employees. Employees are encouraged to share ideas via a shared email address and employee blog for how we can become more energy efficient as a company. U.S. Bank also has more than 30 employee green teams which lead sustainable volunteer efforts at a local level across the company.

C4.5

Company-wide

**Description of product/Group of products**

U.S. Bank offers a variety of online banking options for our consumer and commercial customers. These products help customers avoid emissions by eliminating the need to travel to our branch locations and the emissions associated with mailing communications and payments/ deposits. An example of this is our launch of Zelle's person to person electronic payments for no cost to the user. As a way of incenting use of these electronic options, U.S. Bank switched to making paper statements only available for an extra charge.

**Are these low-carbon product(s) or do they enable avoided emissions?**

## C5. Emissions methodology

---

## C5.1

---

### (C5.1) Provide your base year and base year emissions (Scopes 1 and 2).

#### Scope 1

**Base year start**

January 1 2014

**Base year end**

December 31 2014

**Base year emissions (metric tons CO2e)**

60412

**Comment**

To better account for emissions under a new leased site modeling methodology, U.S. Bank recalculated our CY2014 and CY2015 emissions. We have restated our baseline as CY2014 and the revised emissions figures for CY2014 are reported here.

#### Scope 2 (location-based)

**Base year start**

January 1 2014

**Base year end**

December 31 2014

**Base year emissions (metric tons CO2e)**

354799

**Comment**

To better account for emissions under a new leased site modeling methodology, U.S. Bank recalculated our CY2014 and CY2015 emissions. We have restated our baseline as CY2014 and the revised emissions figures for CY2014 are reported here.

#### Scope 2 (market-based)

**Base year start**

January 1 2014

**Base year end**

December 31 2014

**Base year emissions (metric tons CO2e)**

354799

**Comment**

To better account for emissions under a new leased site modeling methodology, U.S. Bank recalculated our CY2014 and CY2015 emissions. We have restated our baseline as CY2014 and the revised emissions figures for CY2014 are reported here.

## C5.2

---

### (C5.2) Select the name of the standard, protocol, or methodology you have used to collect activity data and calculate Scope 1 and Scope 2 emissions.

Defra Voluntary 2017 Reporting Guidelines

The Climate Registry: General Reporting Protocol

The Greenhouse Gas Protocol: A Corporate Accounting and Reporting Standard (Revised Edition)

US EPA Climate Leaders: Direct HFC and PFC Emissions from Use of Refrigeration and Air Conditioning Equipment

US EPA Climate Leaders: Indirect Emissions from Purchases/ Sales of Electricity and Steam

US EPA Climate Leaders: Direct Emissions from Mobile Combustion Sources

## C6. Emissions data

---

## C6.1

---

### (C6.1) What were your organization's gross global Scope 1 emissions in metric tons CO2e?

#### Reporting year

##### Gross global Scope 1 emissions (metric tons CO2e)

63333

##### Start date

January 1 2018

##### End date

December 31 2018

##### Comment

#### Past year 1

##### Gross global Scope 1 emissions (metric tons CO2e)

55029

##### Start date

January 1 2017

##### End date

December 31 2017

##### Comment

This is the scope 1 emission for CY2017. The amount of RECs purchased were not fully accounted for in the CY2017 Scope 2 market-based figure and we are restating the emissions with all RECs purchased in CY2017. However, this restatement only impacts the scope 2 market-based figure and the scope 1 emission remains the same.

## C6.2

---

### (C6.2) Describe your organization's approach to reporting Scope 2 emissions.

#### Row 1

##### Scope 2, location-based

We are reporting a Scope 2, location-based figure

##### Scope 2, market-based

We are reporting a Scope 2, market-based figure

##### Comment

To improve GHG inventory completeness, accuracy and relevance U.S. Bank reports a Scope 2 market-based figure.

## C6.3

---

**(C6.3) What were your organization's gross global Scope 2 emissions in metric tons CO2e?**

**Reporting year**

**Scope 2, location-based**

287191

**Scope 2, market-based (if applicable)**

233322

**Start date**

January 1 2018

**End date**

December 31 2018

**Comment**

**Past year 1**

**Scope 2, location-based**

287196

**Scope 2, market-based (if applicable)**

239367

**Start date**

January 1 2017

**End date**

December 31 2017

**Comment**

This is the scope 2 emissions restated for CY2017. We restated our emissions for the previous year due to unallocated RECs in CY2017. This only affects the scope 2 market-based emissions which is now updated from 286,477 MTCO2e to 239,367 MTCO2e.

**C6.4**

---

**(C6.4) Are there any sources (e.g. facilities, specific GHGs, activities, geographies, etc.) of Scope 1 and Scope 2 emissions that are within your selected reporting boundary which are not included in your disclosure?**

Yes

**C6.4a**

---

**(C6.4a) Provide details of the sources of Scope 1 and Scope 2 emissions that are within your selected reporting boundary which are not included in your disclosure.**

**Source**

ATMs (owned and operated independently of our facilities that are not yet reported)

**Relevance of Scope 1 emissions from this source**

Emissions are not relevant

**Relevance of location-based Scope 2 emissions from this source**

Emissions are not relevant

**Relevance of market-based Scope 2 emissions from this source (if applicable)**

Emissions are not relevant

**Explain why this source is excluded**

There are potentially ATMs with small energy consumption that are not being captured in our existing reporting, the emissions would be minimal and thus not relevant.

---

**Source**

Emergency Generator Emissions (for those generators not yet reported)

**Relevance of Scope 1 emissions from this source**

Emissions are not relevant

**Relevance of location-based Scope 2 emissions from this source**

Emissions are not relevant

**Relevance of market-based Scope 2 emissions from this source (if applicable)**

Emissions are not relevant

**Explain why this source is excluded**

U.S. Bank began tracking emissions from emergency generators in 2012 and have been able to capture data from most of our generators. However, there are possibly a few small generators that are not being tracked or estimated as they are fully depreciated assets, not reflected on our asset list. (i.e. inherited through acquisitions).

---

**C6.5**

---

**(C6.5) Account for your organization's Scope 3 emissions, disclosing and explaining any exclusions.**

**Purchased goods and services**

**Evaluation status**

Relevant, not yet calculated

**Metric tonnes CO2e**

<Not Applicable>

**Emissions calculation methodology**

<Not Applicable>

**Percentage of emissions calculated using data obtained from suppliers or value chain partners**

<Not Applicable>

**Explanation**

U.S. Bank has not yet determined a reliable and accurate methodology for tracking and calculating emissions from purchased goods and services

## Capital goods

### Evaluation status

Relevant, not yet calculated

### Metric tonnes CO2e

<Not Applicable>

### Emissions calculation methodology

<Not Applicable>

### Percentage of emissions calculated using data obtained from suppliers or value chain partners

<Not Applicable>

### Explanation

U.S. Bank has not yet determined a reliable and accurate methodology for tracking and calculating emissions from capital goods.

## Fuel-and-energy-related activities (not included in Scope 1 or 2)

### Evaluation status

Not relevant, explanation provided

### Metric tonnes CO2e

<Not Applicable>

### Emissions calculation methodology

<Not Applicable>

### Percentage of emissions calculated using data obtained from suppliers or value chain partners

<Not Applicable>

### Explanation

U.S. Bank captures the bulk of fuel and energy related activities within Scope 1 and 2. These emissions would be de minimis in comparison to our Scope 1 and 2 fuel and energy emissions. Furthermore, U.S. Bank has limited ability to influence Scope 3 emissions within this category.

## Upstream transportation and distribution

### Evaluation status

Not relevant, explanation provided

### Metric tonnes CO2e

<Not Applicable>

### Emissions calculation methodology

<Not Applicable>

### Percentage of emissions calculated using data obtained from suppliers or value chain partners

<Not Applicable>

### Explanation

As a financial services company, U.S. Bank produces a limited number of physical products that require upstream or downstream transportation. The estimated size of this Scope 3 category is therefore small relative to our total estimated Scope 3 emissions.

## Waste generated in operations

### Evaluation status

Relevant, calculated

### Metric tonnes CO2e

5165

### Emissions calculation methodology

U.S. Bank compiles waste data provided by third-party vendors on actual waste streams from serviced locations. We then calculate waste emissions utilizing EPA's Waste Reduction Model (WARM) tool (Version 14, updated March 2016). WARM calculates emissions based on a lifecycle alternative-to-baseline approach. While avoided emissions from recycling and composting are also quantified through the WARM tool, this figure represents only Scope 3 emissions from landfilled waste.

### Percentage of emissions calculated using data obtained from suppliers or value chain partners

100

### Explanation

## Business travel

### Evaluation status

Relevant, calculated

### Metric tonnes CO2e

32382

### Emissions calculation methodology

U.S. Bank captures activity data from several means of business transportation including air, rail and rental car mileage. For air travel, emissions are calculated using Defra DECC (2018) 1.0 business travel –air emissions factors for various seating classes and flight segment lengths. Rental car emissions are determined from actual mileage data and EPA CCCL (2018) emissions factors per mile traveled. Actual rail distance traveled is also collected and emissions estimated with the EPA CCCL (2018) factors.

### Percentage of emissions calculated using data obtained from suppliers or value chain partners

100

### Explanation

## Employee commuting

### Evaluation status

Relevant, not yet calculated

### Metric tonnes CO2e

<Not Applicable>

### Emissions calculation methodology

<Not Applicable>

### Percentage of emissions calculated using data obtained from suppliers or value chain partners

<Not Applicable>

### Explanation

U.S. Bank has not yet determined a reliable and accurate methodology for tracking and calculating emissions from employee commuting within our organization at this time.

## Upstream leased assets

### Evaluation status

Not relevant, explanation provided

### Metric tonnes CO2e

<Not Applicable>

### Emissions calculation methodology

<Not Applicable>

### Percentage of emissions calculated using data obtained from suppliers or value chain partners

<Not Applicable>

### Explanation

Due to our organizational boundary definition for operational control under Scopes 1 and 2, upstream leased assets are incorporated in our Scopes 1 and 2 emissions inventory.

## Downstream transportation and distribution

### Evaluation status

Not relevant, explanation provided

### Metric tonnes CO2e

<Not Applicable>

### Emissions calculation methodology

<Not Applicable>

### Percentage of emissions calculated using data obtained from suppliers or value chain partners

<Not Applicable>

### Explanation

As a financial services company, U.S. Bank produces a limited number of physical products that require downstream transportation. The estimated size of this Scope 3 category is therefore small relative to our total estimated Scope 3 emissions.

## Processing of sold products

### Evaluation status

Not relevant, explanation provided

### Metric tonnes CO2e

<Not Applicable>

### Emissions calculation methodology

<Not Applicable>

### Percentage of emissions calculated using data obtained from suppliers or value chain partners

<Not Applicable>

### Explanation

As a financial services company, U.S. Bank produces a limited number of physical products that require processing. The estimated size of this Scope 3 category is therefore de minimis and not relevant to our Scope 3 emissions.

## Use of sold products

### Evaluation status

Not relevant, explanation provided

### Metric tonnes CO2e

<Not Applicable>

### Emissions calculation methodology

<Not Applicable>

### Percentage of emissions calculated using data obtained from suppliers or value chain partners

<Not Applicable>

### Explanation

As a financial services company, U.S. Bank produces a limited number of physical products. Furthermore, there is a limited set of actions U.S. Bank could take to influence use of sold products (e.g. online banking portals) within Scope 3. The estimated size of this Scope 3 category is therefore de minimis and not relevant to our Scope 3 emissions.

## End of life treatment of sold products

### Evaluation status

Not relevant, explanation provided

### Metric tonnes CO2e

<Not Applicable>

### Emissions calculation methodology

<Not Applicable>

### Percentage of emissions calculated using data obtained from suppliers or value chain partners

<Not Applicable>

### Explanation

As a financial services company, U.S. Bank produces a limited number of physical products. Furthermore, there is a limited set of actions U.S. Bank could take to influence end of life treatment of sold products within Scope 3. The estimated size of this Scope 3 category is therefore de minimis and not relevant to our Scope 3 emissions.

## Downstream leased assets

### Evaluation status

Relevant, calculated

### Metric tonnes CO2e

48317

### Emissions calculation methodology

Emissions from leased office space is estimated in two ways. For sites with invoice data capture, total annual emissions for leased assets was extrapolated from actual consumption data based on the portion of building square feet that is tenant occupied. For sites requiring modeling, building tenant square feet was multiplied by a portfolio energy use intensity factors generated from actual site consumption of electricity and natural gas.

### Percentage of emissions calculated using data obtained from suppliers or value chain partners

100

### Explanation

## Franchises

### Evaluation status

Not relevant, explanation provided

### Metric tonnes CO2e

<Not Applicable>

### Emissions calculation methodology

<Not Applicable>

### Percentage of emissions calculated using data obtained from suppliers or value chain partners

<Not Applicable>

### Explanation

U.S. Bank does not operate any franchises. Therefore, this category is not relevant.

## Investments

### Evaluation status

Relevant, not yet calculated

### Metric tonnes CO2e

<Not Applicable>

### Emissions calculation methodology

<Not Applicable>

### Percentage of emissions calculated using data obtained from suppliers or value chain partners

<Not Applicable>

### Explanation

U.S. Bank is investigating possible methods to measure and report emissions from financial assets. Reporting standards are being developed by several external sources that may support more consistent reporting in the future.

## Other (upstream)

**C7.9**

---

**(C7.9) How do your gross global emissions (Scope 1 and 2 combined) for the reporting year compare to those of the previous reporting year?**

Increased

**C7.9a**

---

**(C7.9a) Identify the reasons for any change in your gross global emissions (Scope 1 and 2 combined) and for each of them specify how your emissions compare to the previous year.**

Change in renewable energy consumption	5183	Decreased	1.76	U.S. Bank's gross scope 1 and 2 emissions decreased due to 'a change in renewable energy consumption' implemented in the 2018 reporting year. This change reflects additional REC procurement made in 2018. In total, 16,305 additional MWh of RECs were procured in 2018, resulting in an additional 5,183 MTCO <sub>2</sub> e reduction compared to the REC quantity purchased in the previous year. Total market-based scope 1 and 2 emissions in the previous year was 294,396 MTCO <sub>2</sub> e, therefore we arrived at 1.76% through $(5183/294396)*100=1.76\%$ .
Other emissions reduction activities	7640	Decreased	2.6	U.S. Bank's gross scope 1 and 2 emissions decreased due to 'other emissions reduction activities' implemented in the reporting year. Such projects include improvements in building operational efficiency including LED lighting retrofits and upgrades to HVAC systems. We estimate that in 2018, 7640 MTCO <sub>2</sub> e was reduced by our emissions reduction projects. Total scope 1 and 2 emissions in the previous year was 294,396 MTCO <sub>2</sub> e, therefore we arrived at 2.60% through $(7640/294396)*100=2.60\%$ .
Divestment		<Not Applicable	>	
Acquisitions		<Not Applicable	>	
Mergers		<Not Applicable	>	
Change in output		<Not Applicable	>	
Change in methodology	3260	Decreased	1.11	For the 2018 inventory, a number of emissions factor updates impacted our overall Scope 1 and 2 emissions including changes in supplier-specific emissions factors, residual mix factors in the United States (PJM and ISO-New England), and international location-based grid emission factors. Net impact was calculated by applying 2017 emission factors to 2018 activity data to determine the difference in emissions from emission factor updates. In total, emissions factor updates decreased emissions by 3,260 MTCO <sub>2</sub> e. The total scope 1 and 2 emissions in the previous year was 294,396 MTCO <sub>2</sub> e, resulting in 1.11% from $(3260/294396)*100=1.11\%$ .
Change in boundary		<Not Applicable	>	
Change in physical operating conditions	9808	Increased	3.33	We experienced an increase in natural gas, steam, stationary propane and fleet fuel consumption in 2018. Conversely chilled water, jet fuel and diesel fuel consumption were reduced. We attribute most of these changes to site operating conditions in North America driven by weather variability. The impact was calculated by finding the YOY change in the emission source and the overall emissions increase attributed from changes physical operating conditions to be 9,808 MTCO <sub>2</sub> e. Total scope 1 and 2 emissions in the previous year was 294,396 MTCO <sub>2</sub> e, therefore the percent change in emissions was calculated as $(9808/294396)*100= 3.33\%$
Unidentified	8534	Increased	2.9	We were unable to identify the exact reasons for the remaining increase in emissions, however, this is most likely due to variations in the number of sites, YoY consumption for electricity and other miscellaneous emission sources. $(8534/294396)*100=2.90\%$
Other		<Not Applicable	>	

**C7.9b**

**(C7.9b) Are your emissions performance calculations in C7.9 and C7.9a based on a location-based Scope 2 emissions figure or a market-based Scope 2 emissions figure?**

Market-based

**C8. Energy**

## C8.1

---

### (C8.1) What percentage of your total operational spend in the reporting year was on energy?

More than 0% but less than or equal to 5%

## C8.2

---

### (C8.2) Select which energy-related activities your organization has undertaken.

Consumption of fuel (excluding feedstocks)	Yes
Consumption of purchased or acquired electricity	Yes
Consumption of purchased or acquired heat	No
Consumption of purchased or acquired steam	Yes
Consumption of purchased or acquired cooling	Yes
Generation of electricity, heat, steam, or cooling	Yes

## C8.2a

---

### (C8.2a) Report your organization's energy consumption totals (excluding feedstocks) in MWh.

Consumption of fuel (excluding feedstock)	HHV (higher heating value)	0	332849	332849

## C8.2e

---

**(C8.2e) Provide details on the electricity, heat, steam, and cooling your organization has generated and consumed in the reporting year.**

Electricity	27	27	27
Heat			
Steam			
Cooling			

## C8.2f

---

**(C8.2f) Provide details on the electricity, heat, steam and/or cooling amounts that were accounted for at a low-carbon emission factor in the market-based Scope 2 figure reported in C6.3.**

**Basis for applying a low-carbon emission factor**

Energy attribute certificates, Renewable Energy Certificates (RECs)

**Low-carbon technology type**

Other low-carbon technology, please specify (Wind and Solar)

**Region of consumption of low-carbon electricity, heat, steam or cooling**

North America

**MWh consumed associated with low-carbon electricity, heat, steam or cooling**

10621

**Emission factor (in units of metric tons CO2e per MWh)**

0

**Comment**

In CY2018, U.S. Bank purchased a total of 1491 MWh of Green-e Certified Clean Source RECs through both Portland General Electric's Clean Wind Green Tags. Additionally, in CY2018, U.S. Bank purchased a total of 9,130 MWh of Green-e Certified Clean Source RECs through Xcel's Renewable\*Connect program. The Renewable\*Connect program includes a mix of wind and solar energy, both of which carry an emissions attribute of 0. 'Other low-carbon technology, please specify' was selected to clarify this fact.

## C10.2

---

**(C10.2) Do you verify any climate-related information reported in your CDP disclosure other than the emissions figures reported in C6.1, C6.3, and C6.5?**

No, but we are actively considering verifying within the next two years

## C11. Carbon pricing

---

### C11.1

---

**(C11.1) Are any of your operations or activities regulated by a carbon pricing system (i.e. ETS, Cap & Trade or Carbon Tax)?**

No, and we do not anticipate being regulated in the next three years

### C11.2

---

**(C11.2) Has your organization originated or purchased any project-based carbon credits within the reporting period?**

No

### C11.3

---

**(C11.3) Does your organization use an internal price on carbon?**

No, and we do not currently anticipate doing so in the next two years

## C12. Engagement

---

### C12.1

---

**(C12.1) Do you engage with your value chain on climate-related issues?**

Yes, our suppliers

Yes, our customers

Yes, other partners in the value chain

### C12.1a

---

**(C12.1a) Provide details of your climate-related supplier engagement strategy.**

**Type of engagement**

Information collection (understanding supplier behavior)

**Details of engagement**

Collect climate change and carbon information at least annually from suppliers

**% of suppliers by number**

0.13

**% total procurement spend (direct and indirect)**

5

**% Scope 3 emissions as reported in C6.5**

100

**Rationale for the coverage of your engagement**

U.S. Bank's supplier engagement efforts around climate change are managed by the Procurement team. Because many business lines manage specific supplier relationships outside of this process, engagement efforts have not yet reached those suppliers. We are currently working on process improvements that would allow us to engage with a larger number of suppliers. We have increased our engagement significantly each year (52 suppliers in 2018/ 39 suppliers in 2017/ 9 suppliers in 2016) in an effort to better understand our customers' environmental programs and leverage available programs to reduce our environmental impact. Another rationale for engaging with the suppliers included above is materiality. The suppliers with whom we currently engage are ones that provide products or services that have an impact on the environment, such as business travel vendors or copy machine vendors. A large portion of our annual spend is on suppliers who provide a service, such as temporary employees, and therefore, have a much smaller environmental impact. We prioritize engagement based on programs in place that we can leverage in order to reduce our emissions or the emissions of our supplier and customers and based on largest impact to emissions. Examples are our Green Auto loan where we leverage the EPA SmartWay program to help our customers reduce their emissions and utilizing the robust program our copy machine vendor already has in place to reduce our energy use, resulting in lower emissions for us, and increase our product recycling efforts. In 2018, U.S. Bank also added 3 new questions to our RFP process for all new projects. This will assist with learning what environmental programs our suppliers have in place and how their results are measured.

**Impact of engagement, including measures of success**

In certain vendor selection processes, U.S. Bank engages with suppliers to discuss opportunities related to the goods and services being purchased. An example of this is working with our promotional item vendor on alternative items that are similar to what is currently being offered, but with a smaller carbon footprint, such as local items to reduce emissions during shipping, or items made from recycled materials. We have also implemented guidelines for our office supply vendor regarding shipping orders. Larger orders are required to ship in an effort to cut down on number of shipments and emissions related to shipping supplies. Discussions with our supply and copy machine vendors have already resulted in changes to a more environmentally friendly standard paper option and expanded utilization of our copy vendor's recycling program. These efforts have resulted in large increases in number of suppliers with whom we engage (from 4 suppliers in 2015 to 52 suppliers in 2018). We anticipate that this number will continue to increase as we grow this program, especially with the added questions to our RFP process. We continue to evaluate our supplier approval program to find ways to prioritize suppliers based on their climate change reduction efforts. Another example of engagement is with our waste management vendor. In 2018, we streamlined management of waste and recycling services under one vendor in an effort to better track and utilize recycling options. We will measure success by the number of locations reporting use of U.S. Bank's Eco2Go recycling program that was developed for smaller and more remote locations. We are also leveraging the expertise of this vendor to educate U.S. Bank employees around recycling and waste management options. This engagement will provide increased visibility and metrics for measuring our success in this area. We measure success quantitatively through number of suppliers with whom we engage and qualitatively through progress made to leverage programs in place by our suppliers within U.S. Bank to strengthen our environmental efforts.

**Comment**

---

**C12.1b**

---

**(C12.1b) Give details of your climate-related engagement strategy with your customers.**

**Type of engagement**

Education/information sharing

**Details of engagement**

Run an engagement campaign to education customers about your climate change performance and strategy

**% of customers by number**

100

**% Scope 3 emissions as reported in C6.5**

0

**Please explain the rationale for selecting this group of customers and scope of engagement**

U.S. Bank has taken a wide, more general approach to engage and educate our customers in an effort to encourage customers to bring specific questions to us and seek deeper conversations. We feel this is the most efficient way of sharing our performance and strategy. We target all customers in an effort to reach the largest number possible with our communication and engagement efforts.

**Impact of engagement, including measures of success**

Through U.S. Bank's RFP process, customers are analyzing us in part based on our climate change strategies and environmental initiatives and we have offered to collaborate with them to help meet their needs. We also engage with and educate customers by sharing our environmental initiatives and statistics via our Corporate Social Responsibility Annual Report which is available to all customers and the general public. We draw attention to it on our website and share it on social media to raise awareness. Our Environmental Responsibility Policy is also available on our website to educate customers. Both of these items are also discussed at our annual shareholder meeting as another avenue to engage customers. We measure success quantitatively through an increase in conversations with customers and new business, as well as qualitatively through expanded relationships with our customers around climate change issues. This has resulted in more frequent and meaningful discussions around U.S. Bank's impact on the environment. We expect this initiative to continue growing over the next couple years. For the first time, in 2018, we produced a GRI index and a one page environmental, social, governance (ESG) document that includes information on our efforts to reduce climate change impact. Both of these documents are available for U.S. Bank customers to download via [www.usbank.com/community](http://www.usbank.com/community). We will measure success for reaching customers and other stakeholders by looking at the number of downloads for each document from our website.

---

**C12.1c**

---

**(C12.1c) Give details of your climate-related engagement strategy with other partners in the value chain.**

U.S. Bank's Environmental Program Manager engages regularly with industry peers via monthly meetings and other "as needed" group and individual calls and emails. This forum allows us to share best practices to identify and manage climate-related risks and opportunities. It also allows us to collaborate and address climate issues as a group for a larger impact. As an industry, we are collaborating on solutions and strategies to keep up with an increase in reporting requirements around climate change. As part of the monthly round table we recently heard from various reporting organizations, such as CDP and SASB, and were provided an opportunity to address new frameworks and changes to existing frameworks affecting our industry. Our feedback was impactful to develop the final versions of each framework.

This round table has provided a peer resource for successful tracking and measuring of employee commuting emissions. U.S. Bank plans to utilize this resource over the next year to begin work on calculating our employee commuting emissions.

**C12.3**

---

**(C12.3) Do you engage in activities that could either directly or indirectly influence public policy on climate-related issues through any of the following?**

Trade associations

Other

## C12.3b

---

**(C12.3b) Are you on the board of any trade associations or do you provide funding beyond membership?**

No

## C12.3e

---

**(C12.3e) Provide details of the other engagement activities that you undertake.**

As a member of the Ceres Company Network, their policy team keeps us informed on energy policy, particularly in our major markets, and provides opportunities for us to participate in joint efforts to inform and provide feedback to policy makers at the national and state levels.

## C12.3f

---

**(C12.3f) What processes do you have in place to ensure that all of your direct and indirect activities that influence policy are consistent with your overall climate change strategy?**

Direct and indirect activities are reviewed and approved by a level of senior management not more than three levels removed from the CEO. Potential engagement opportunities are brought to the attention of U.S. Bank's Environmental Program Manager who reviews them within the context of U.S. Bank's Environmental Responsibility Policy. The Environmental Program Manager takes the opportunity to the appropriate Environmental Working Group members, or the full group, depending on the focus of the opportunity, for feedback. The ultimate decision is made in collaboration with the Senior Vice President, Chief Corporate Social Responsibility Officer and is reflective of U.S. Bank's climate change strategy and policy.

## C12.4

---

**(C12.4) Have you published information about your organization's response to climate change and GHG emissions performance for this reporting year in places other than in your CDP response? If so, please attach the publication(s).**

## SC. Supply chain module

---

### SC0.0

---

**(SC0.0) If you would like to do so, please provide a separate introduction to this module.**

### SC0.1

---

**(SC0.1) What is your company's annual revenue for the stated reporting period?**

Row 1

22637000000

### SC0.2

---

**(SC0.2) Do you have an ISIN for your company that you would be willing to share with CDP?**

Yes

### SC0.2a

---

**(SC0.2a) Please use the table below to share your ISIN.**

Row 1 US

90297330

### SC1.1

---

**(SC1.1) Allocate your emissions to your customers listed below according to the goods or services you have sold them in this reporting period.**

### SC1.2

---

**(SC1.2) Where published information has been used in completing SC1.1, please provide a reference(s).**

### SC1.3

---

---

**(SC1.3) What are the challenges in allocating emissions to different customers, and what would help you to overcome these challenges?**

Customer base is too large and diverse to accurately track emissions to the customer level

As a very large financial services provider with a large and diverse customer base, the majority of U.S. Bank's emissions result from our ongoing business operations. Our facilities, our technologies, and our employees all support various aspects of the services we provide and are not dedicated to one product or service or to one customer.

**SC1.4**

---

**(SC1.4) Do you plan to develop your capabilities to allocate emissions to your customers in the future?**

No

**SC1.4b**

---

**(SC1.4b) Explain why you do not plan to develop capabilities to allocate emissions to your customers.**

Due to the structure of U.S. Bank's operations and the nature of the products and services we provide, it is unlikely that there would be any accurate way to allocate emissions to the customer level.

**SC2.1**

---

**(SC2.1) Please propose any mutually beneficial climate-related projects you could collaborate on with specific CDP Supply Chain members.**

**SC2.2**

---

**(SC2.2) Have requests or initiatives by CDP Supply Chain members prompted your organization to take organizational-level emissions reduction initiatives?**

No

**SC3.1**

---

**(SC3.1) Do you want to enroll in the 2019-2020 CDP Action Exchange initiative?**

No

**SC3.2**

---

**(SC3.2) Is your company a participating supplier in CDP's 2018-2019 Action Exchange initiative?**

No

**SC4.1**

---

**(SC4.1) Are you providing product level data for your organization's goods or services?**

No, I am not providing data

**Submit your response**

---

**In which language are you submitting your response?**

English

**Please confirm how your response should be handled by CDP**

I am submitting my response  Public
